## PROFESSIONAL EXPERIENCE

**Software Engineer, SmoothSail** ([smooth-sail.github.io](https://smooth-sail.github.io)) 🔗 2023 – present

- Built a feature flag management platform that enables developer teams to release/rollback features with a toggle and create reusable segments for targeting users during canary and ring rollouts.
- Led development and implemented a RESTful API and a CRUD application, leveraging ORM libraries for ACID-compliant data management to meet user demands.
- Enhanced app security by incorporating an SDK key encryption that supports 500 authorization requests per second.
- Architected and built a scalable event-driven communication channel between SmoothSail components by leveraging the NATS JetStream message broker.
- Designed and implemented real-time event notifications using EventSource API and server-sent events to optimize server performance, accommodating a higher application load.
- Designed UI to facilitate the use of SmoothSail by non-technical stakeholders.
- Authored a comprehensive case study detailing engineering challenges and solutions: [smooth-sail.github.io/case-study](https://smooth-sail.github.io/case-study) 🔗
- Worked with a remote team of 4 developers across the US using an agile workflow.

**Software Engineer, Self-employed** 2020 – 2023

Developed personal and open-source applications. Selected projects:

- *Request Bucket* - Tool for debugging webhooks (DO Droplet, Nginx, MongoDB, PostgreSQL, Node.js, Express, React).
- *Chronos*: Time management web application (Ruby, Sinatra, PostgreSQL, ERB).
- *MiniMarket*: An e-commerce shopping cart (React, Express, Node.js, MongoDB).

**Data Scientist, Postdoctoral Research Fellow, DOE Joint Genome Institute** 2019 – 2023

- Led the development of an innovative HPC Microbiome data analysis pipeline for the IMG/M web portal.
- Handled 3 multi-disciplinary collaborative projects to generate and analyze high-throughput genomic data, which led to 2 peer-reviewed publications.
- Engaged in scientific communication through workshops and conferences; created and coordinated the JGI Journal Club with cross-functional research teams.

**Computational Biologist, Graduate Research Assistant,** 2014 – 2019

*College of Pharmacy, Oregon State University*

- Created scientific software tools, including those tailored for execution on HPC clusters, to enhance the efficiency of data analysis workflows.
- Managed 3 collaborative projects with cross-functional teams from Norway, Brazil, and the US, which led to 4 peer-reviewed publications.
- Led a team of 3 undergraduate students that won 9 awards and scholarships with \$25,700 in total reward.

## SKILLS

**Programming Languages & Frameworks:** Ruby, JavaScript, TypeScript, Go, Python, R, Bash, SQL, HTML/CSS, Sinatra, Ruby on Rails, Express.js, Jest.

**Technologies & Tools:** Node.js, jQuery, React, Sequelize.js, HTTP/HTTPS, SSE, OOP, ERD, ORM, REST APIs, PostgreSQL, MongoDB, Conda, Bioconductor, Git/GitHub, Docker, Nginx, Postman.

**Systems & Platforms:** Linux/Unix, HPC, Digital Ocean, AWS, Heroku, Slurm, SGE.

**Other:** Statistical Analysis, Data Mining, Big Data, Network Analysis, Data Visualization, Scientific Writing.

## EDUCATION

**Ph.D. - Pharmaceutical Sciences, Biological Data Science,** 2014 – 2019  
*Oregon State University*

**M.S. - Biophysics, Taras Shevchenko National University of Kyiv** 2008 – 2010
