PROFESSIONAL EXPERIENCE

Software Engineer, Creator, SmoothSail (smooth-sail.github.io) 🔗 2023 – present

- Built a feature flag management platform that enables developer teams to release/rollback features with a toggle and create reusable segments for targeting users during canary and ring rollouts.
- Designed and developed a RESTful API and a CRUD application, leveraging ORM libraries for ACID-compliant data management to meet user demands.
- Enhanced app security by incorporating an SDK key encryption mechanism that supports 500 authorization requests per second.
- Architected and contributed to the implementation of a durable event-driven asynchronous communication channel between SmoothSail components by leveraging the NATS JetStream message broker.
- Designed and contributed to building real-time event notifications using EventSource API and server-sent events, allowing horizontal scaling to accommodate increased application load.
- Contributed to the design and development of UI that facilitates the use of SmoothSail by non-technical stakeholders.
- Authored a comprehensive case study detailing engineering challenges and solutions: smooth-sail.github.io/case-study 🔗
- Collaboratively conceived, wrote, and refined SmoothSail with a remote team of 4 developers across the US using an agile workflow.

Software Engineer, Self-employed 2020 – 2023

Developed personal and open-source applications. Selected projects:

- *Request Bucket* - Tool for collecting and debugging webhooks (DO Droplet, Nginx, MongoDB, PostgreSQL, Node.js, Express, React).
- *ToDo Tracker*: A web application for tracking tasks (Ruby, Sinatra, PostgreSQL, ERB).
- *MiniMarket*: An e-commerce shopping cart (React, Express, Node.js, MongoDB).

Data Scientist, Postdoctoral Research Fellow, DOE Joint Genome Institute 2019 – 2023

- Led the development of an innovative HPC Microbiome data analysis pipeline and closely worked with the software engineering team to ensure its implementation at the IMG/M web portal.
- Handled 3 multi-disciplinary collaborative projects to generate and analyze high-throughput genomic data, which led to 2 peer-reviewed publications.
- Actively engaged in scientific communication through workshops and conferences; created and coordinated the JGI Journal Club with cross-functional research teams.

Computational Biologist, Graduate Research Assistant, 2014 – 2019

College of Pharmacy, Oregon State University

- Created scientific software tools, including those tailored for execution on HPC clusters, to enhance the efficiency of data analysis workflows.
- Maintained 3 collaborative projects with cross-functional teams from Norway, Brazil, and the US, which led to 4 peer-reviewed publications.
- Guided a team of 3 undergraduate students that won 9 awards and scholarships with \$25,700 in total reward.

SKILLS

Programming Languages & Frameworks: Ruby, JavaScript, TypeScript, Go, Python, R, Bash, SQL, HTML/CSS, Sinatra, Ruby on Rails, Express.js, Jest.

Technologies & Tools: Node.js, jQuery, React, Sequelize.js, HTTP/HTTPS, SSE, OOP, ERD, ORM, REST APIs, PostgreSQL, MongoDB, Conda, Bioconductor, Git/GitHub, Docker, Nginx, Postman.

Systems & Platforms: Linux/Unix, HPC, Digital Ocean, AWS, Heroku, Slurm, SGE.

Other: Statistical Analysis, Data Mining, Big Data, Network Analysis, Data Visualization, Scientific Writing.

EDUCATION

Ph.D. - Pharmaceutical Sciences, Biological Data Science, 2014 – 2019
Oregon State University

M.S. - Biophysics, Taras Shevchenko National University of Kyiv 2008 – 2010
